# 2. How to Re-Seed the Database Anytime

Execute this command in your terminal whenever you want to wipe test runs and restore clean seed data:

```
cd server; npm run db:seed
```

(Runs in PowerShell or CMD)

**What the seed script does automatically:**

- Truncates all platform tables (users, shipments, ledger, ratings, notifications, activity) with CASCADE.
- Recreates all 4 core accounts above with approved status and password Masar@123.
- Seeds 7 distinct approved manufacturers across Jordan and 12 diverse drivers with varied trucks.
- Creates 4 pending approval applicants (2 manufacturers, 2 drivers) in /admin/approvals.
- Seeds 48 lifecycle shipments (29 audited with ratings, 4 in delivery, 3 delivered, 3 waiting load, 6 pending, 3 requested).
- Resets ticket sequence so your next live test shipment starts cleanly at MSR-000127.
- Leaves Captain Omar Ayman completely free and ready to accept new jobs.
